# **Project Title: JOBLICIOUS**

## **DESCRIPTION:**

Joblicious is a comprehensive web-based platform designed to streamline the job application process and connect job seekers with recruiters. It provides distinct roles for three types of users: admin, recruiter, and job seeker. Each user role has specific functionalities and access levels tailored to their needs.

### **Admin:**

1. The admin has the highest level of access and control over the platform.
2. They can modify user accounts, including creating, updating, and deleting user profiles.
3. The admin can also manage job listings by adding new jobs, editing existing ones, and deleting job postings.
4. They have the ability to update their own profile information.
5. The admin can search for users and jobs within the system, allowing for efficient data retrieval.
6. The admin has the capability to read reports submitted by users.
7. The admin can log out of the system to ensure secure access.

### **Recruiter:**

1. Recruiters have the ability to log into the platform using their credentials.
2. They can add job listings, providing comprehensive details about the position and its requirements.
3. Recruiters can view the jobs they have posted and delete them as needed.
4. They have the ability to search for specific jobs they have added to easily manage and track their listings.
5. Recruiters can review job applications submitted by job seekers, allowing them to accept or reject applicants based on their qualifications.
6. They can also download the CV of the applicants
7. The recruiter has the option to log out of the system for security purposes.

### **Job Seeker:**

1. Job seekers can create an account and log into the platform to access job opportunities.
2. They can search for jobs based on specific criteria such as job title.
3. Job seekers can view detailed job descriptions and apply to positions that match their interests and qualifications.
4. They have the ability to upload their CV (resume) to their profile for submission with job applications.
5. Job seekers can view their previous job applications, track their progress, and download their submitted CVs.
6. Additionally, job seekers can add reports, providing feedback or reporting issues they encounter within the platform.
7. Job seekers have the option to log out, ensuring the security of their account.
8. Overall, Joblicious offers a user-friendly interface and efficient functionalities to facilitate seamless communication between job seekers and recruiters. The platform simplifies the job search process, enables recruiters to manage their job listings effectively, and empowers administrators with comprehensive control and reporting capabilities.

**USERS:**

1. Admin
2. Job Seeker
3. Job Recruiter

# JavaScript

Did you use JavaScript in your application? Yes / No

## Custom JavaScript

Where did you use JavaScript?	Briefly describe the purpose
In the adminheader.php	I used java script to show the side bar navigation in the page when I click on the left top toggle button the side menu appears the shape of toggle button changes, from where you can navigate to other pages.
